Data Extraction and Post-Processing

Extracting meaningful data from simulations is critical for analysis. Maxwell Script can access simulation results such as magnetic flux densities, electric fields, forces, torques, and more. Scripts can process raw data to generate charts, histograms, or export results to external files like Excel, CSV, or databases.

This automated data handling accelerates decision-making processes and supports detailed reports.

Integration With External Tools and Databases

Maxwell Script supports integration with other software tools, such as MATLAB, Excel, and databases. This interoperability allows users to extend Maxwell's capabilities, perform complex data analysis, or incorporate external data sources into their simulation workflows.

For example, a script can export data to MATLAB for advanced analysis or visualization, then import the results back into Maxwell for further processing.
